

(2) CSS

Ch-0

- HTML is just an skeletal layout of a website we need CSS to design a website and styles to it and make it look beautiful.

What is CSS?

CSS → Cascading Style Sheets

CSS is optional but it converts an off looking HTML page into a beautiful and responsive website.

Why learn CSS?

CSS is a very demanded skill in the world of web development. If you are successfully able to master CSS you can customize your websites as per your liking.

Your first line of CSS

Create a CSS file inside your directory and add it to your HTML. Add the following line to your CSS.

```
body {  
  background-color: red;  
}
```

"This will make your page background as red"

HTML Refresher

HTML is a bunch of tags used to lay the structure of a page.

Note : cho

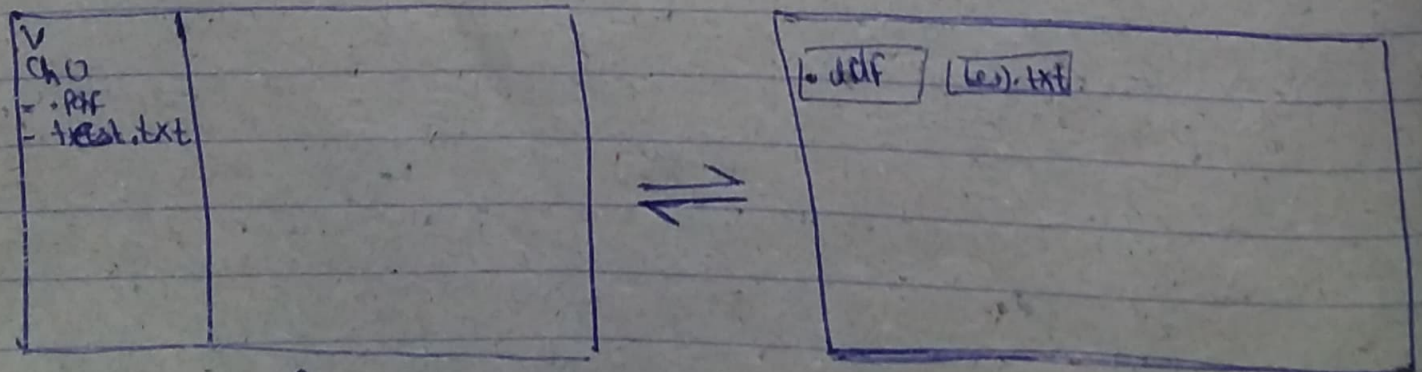

- We add CSS into head tag.
 - In CSS - Responsiveness, Media Queries, Transforms, Animations, flexbox, Grid
 - CSS is nothing but how pre existing html add CSS to make it beautiful.
 - with CSS, you can control the color, font, the size of text, the spacing b/w element, how elements are positioned and laid out.
- Imp shortcut of VS code

If I want to open any particular folder in VS code.

Shift + Right click = open powershell / terminal.

code . = the particular folder open in VS code.

VS code
